Show More Your oxygen sensor, sometimes called an O2 sensor or air-fuel ratio sensor, measures the oxygen level in your exhaust gases. It then relays this information to the ECU to adjust the fuel mixture. If there is too much oxygen in the exhaust, the fuel mixture is too lean, but too little oxygen indicates a rich fuel mixture.

2 Answers. The O2 sensor is on the exhaust system but I doubt it has anything to do with idle issue. It might be the IAC. A 2000 will have 4 of them 2 upstream or before the catalyst and 2 downstream after the catalyst. I agree with F\_O\_R they won't cause an idle problem like your having.
