The annelids (also called Ringed Worm), collectively called Annelida (from French annelés "ringed ones", ultimately from Latin anellus "little ring"), are a large phylum of segmented worms, with...

How do annelid worms excretion? - Answers

Annelids include earthworms, marine worms, such as the ones shown in Figure 25.22, and parasitic leeches. All of these worms are different from flatworms and roundworms because they are segmented and have a coelom. Most annelids also have a larval stage that is similar to that of certain mollusks, suggesting a common ancestor. Annelids
