How to Bi-Wire Your Speakers. To bi-wire your speakers, first remove those jumpers and use two sets of speaker cables. At the speaker end they will separate and at your receiver or amplifier end, they will typically be joined together. Some higher performance amplifiers even have two sets of speaker connections to make it easier to connect things up.

Bi-wiring works to reduce the tendency for strong bass signals (in general) to overwhelm the rest of the audio signal. Bi-wire configuration will improve the sound since it improves/bypasses the crossover. When bi-wiring you can choose different cables optimised for the different frequency ranges, which will improve the overall

An exploration of the benefits

A quick easy way to eliminate bi-wire is to install the jumpers with the 8PR connected as it is now. If you could use a short piece of quality wire to do this, that should be better than the straps.

Nevertheless, that will eliminate bi-wire for a comparison.
